

## **Expansion of our manufacturing lines**

**extended possibilities for production processes**

With the purpose of enhancement of general storage capacities and advancement of our internal logistics, the IPC invested in the second half of 2016 in extension and modernization of existing manufacturing facilities.

Accomplishment of the mentioned construction works in summer 2017 will not only optimize cleaning processes and storage of the equipment, but also open new production areas. The latter ensures even more secure handling of intermediates and final products in the process of filling and packaging to the highest hygiene standards.
